

Corn Product Silage Quality

Trial Objective

- In order to get the most out of corn silage, the corn product should produce high tonnage with favorable silage quality characteristics.
- This study was conducted to determine the silage quality characteristics of various corn products.

Research Site Details

Location	Soil Type	Previous Crop	Tillage Type	Planting Date	Harvest Date	Potential Yield (bu/acre)	Seeding Rate (seeds/acre)
Gothenburg, NE	Hord silt loam	Soybean	Strip-till	04/28/18	09/2018	270	34K

- The study was set up as a randomized complete block with three replications.
- Twenty corn products were evaluated.
- Corn was sprinkler irrigated and weeds were controlled as needed. No fungicide or insecticide was applied.
- Silage quality was sampled for each corn product between ½ to ¾ milk line. Sampling date varied by relative maturity, but all sampling occurred in the first two weeks of September.
- Corn products were hand-harvested one inch above the soil surface to provide a representative sample and were then chopped with a wood chipper.
- A subsample of the freshly-chopped material was collected and sent to Dairyland Laboratories Inc. for silage quality analysis.

Understanding the Results

- Corn products did vary in silage quality as there were significant differences in all characteristics tested as reported in Table 1.
- Producers should work with their local seed sales team to identify how their branded corn products performed in this study.

What Does This Mean for Your Farm?

- Silage quality characteristics varied across the twenty corn products tested.
- This silage quality test should help farmers choose corn products that provide more value to their operation.

Figure 1. Corn product 109RM-A (left), 105RM (center), and 114RM-B (right) at silage harvest.

Corn Product Silage Quality

Table 1. Silage quality characteristics of the 20 corn products.

B.t. products may not yet be registered in all states. Check with your seed brand representative for the registration status in your state.

IMPORTANT IRM INFORMATION: RIB Complete® corn blend products do not require the planting of a structured refuge except in the Cotton-Growing Area where corn earworm is a significant pest. SmartStax® RIB Complete® corn blend is not allowed to be sold for planting in the Cotton-Growing Area. See the IRM/Grower Guide for additional information. Always read and follow IRM requirements. Performance may vary, from location to location and from year to year, as local growing, soil and weather conditions may vary. Growers should evaluate data from multiple locations and years whenever possible and should consider the impacts of these conditions on the grower's fields.

ALWAYS READ AND FOLLOW PESTICIDE LABEL DIRECTIONS. Roundup Ready technology contains genes that confer tolerance to glyphosate, an active ingredient in Roundup® brand agricultural herbicides. Agricultural herbicides containing glyphosate will kill crops that are not tolerant to glyphosate. Hubner Seed & Design™ and Hubner Seed™ are trademarks of Bayer Group.
